

RAILER Lesson 02 – Track Network Setup

Objectives

- Initialize a RAILER Database
- Understand the breakup of a network into areas, tracks, and segments
- Develop a designation for tracks and segments
- Enter network, area, track, and segment information into RAILER

Hands-On Exercise

Below is an example track layout for a portion of a network. This layout will be used to illustrate the development of track networks, areas, tracks, and segments in RAILER.

The user will use RAILER to:

1. Create a new RAILER database
2. Setup the Network Information
3. Create Areas
4. Add tracks and assign them to areas
5. Divide the track into logical segments in the database
